S6 Structural models and input files

The following files are provided as additional information through github:

- Input files for the structural optimization of the initial models through VASP.
- Input files for the NMR calculations through VASP.
- Python scripts for the classification of carbon atoms into classes for the g_S model and for the derivation and fitting of the resulting spectrum to experimentally provided data.

The files may be found in the following github repository: `https://github.com/molmod/copacof`.
